Our Commitment

We always committed to maintaining 100% purity of honey
from natural nectar, our commitment is also to protect the
surrounding vegetation as source of been nectar.

We try to educate the public about the purity of honey based
on science, research, and break false stereotypes about pure
honey in Indonesian public

Mellifera Honey

Pure honey from the superior stinging bee of Apis Mellifera. The bees are placed in consevation forest with a continuous nectar cycle throughout the years, so that the honey remains natural. The nutritional content,color, taste and aroma of honey always change according to the flower cycle in the shepherd's area.

Mellifera Honey

Trigona Honey

Pure honey from unique stingless bees. The honey bag is made of propolis, so honey naturally dissolves propolis. It has a fresh sweet and sour taste and is anti-microbial. Cultivated naturally in areas with well-maintained vegetation, free from pollution, pesticides and far from residential areas.

Trigona's honey bag

Trigona Honey

Dorsata Honey

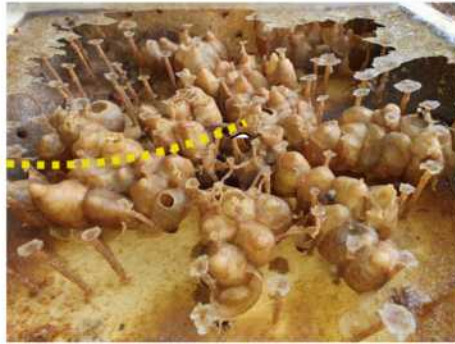

Pure honey from the wild bee stinger Apis Dorsata. Living in colonies on trees and rock cliffs. Bees always migrate following the nectar cycle from their territory. the cruising range of up to 5 Km makes the honey character multiflora and rich in pollen. we have a network of educated wild honey hunters, sustainable harvesting systems, and care for the environment and remain oriented towards forest sustainability
